**Description**

When I run my puppet run by kicking a host or let puppet do this run by itself I get the following error in my Report for the php5-fpm service.

Could not evaluate: invalid byte sequence in US-ASCII

When I performa a puppet agent -t --debug as root I don't get this error in my Foremanlog of the host.

Foreman/Puppet seems to overwrite the Language ?

**History**

**#1 - 04/08/2015 05:47 AM - Dominic Cleal**

*- Status changed from New to Rejected*

This sounds like an issue with how the Puppet agent is run (e.g. as a daemon without UTF-8 support), not Foreman.
