### Description

puppetrun has been renamed to "puppet kick" in puppet version 2.6+

This is from puppet enterprise but should be the same with non enterprise edition

puppetrun has been renamed to puppet kick

[root@puppet lib]# puppet
Usage: puppet command <space separated arguments>
Available commands are: agent, apply, cert, describe, doc, filebucket, kick, license, master, queue, resource

How will the single executable improve the ease of use of Puppet?

```
From verison 2.6.0 and onwards all the Puppet functions are also available via a single Puppet bin
ary, in the style of git. The list of binary changes    includes:

puppetmasterd -> puppet master
puppetd -> puppet agent puppet -> puppet apply
puppetca -> puppet cert
ralsh -> puppet resource
puppetrun -> puppet kick
puppetqd -> puppet queue
filebucket -> puppet filebucket
puppetdoc -> puppet doc
pi -> puppet
```

### History
