

## Foreman - Bug #1007

### Foreman takes to long when searching for reports

<b>Description</b>	
<p>This seems to be a problem with environments having a large number of reports (15000+ reports). The query can take up to 2 minutes to return.</p> <p>Discussion here: <a href="http://groups.google.com/group/foreman-users/browse_thread/thread/3afc1bebcbe7b682?hl=en">http://groups.google.com/group/foreman-users/browse_thread/thread/3afc1bebcbe7b682?hl=en</a></p> <p>A simple query such as:</p> <p><a href="https://foreman/reports?search=FQDN">https://foreman/reports?search=FQDN</a></p>

when using a free text search (like in your example), foreman would search across all report attributes for a string called "fqdn", you really want to use the more specific search in this case, for example:

```
foreman/reports?search='host = fqdn'
```

in order to track the problem around large data set, it would be very helpful to get a debug output of the real sql queries.
