

Smart Proxy - Bug #1014

sudoers file does not support puppet 2.6+ for puppetca and puppetrun

06/29/2011 02:28 PM - Corey Osman

Status: Closed	
Priority: Normal

Pull request:	
Description	
<p>The default permissions in the /etc/sudoers files that smart-proxy only supports puppetca and puppetrun. Since puppetca is deprecated in 2.6+ an additional binary will need to be added to the sudoers file. Puppet now uses puppet kick for puppetrun and puppet cert for puppetca.</p>	
current:	
<pre>foreman ALL = NOPASSWD: /usr/sbin/puppetca Defaults:foreman !requiretty foreman ALL = NOPASSWD: /usr/bin/puppetrun</pre>	
<pre>foreman-proxy ALL = NOPASSWD: /usr/sbin/puppetca Defaults:foreman-proxy !requiretty</pre>	
Support for both	
<pre>foreman ALL = NOPASSWD: /usr/sbin/puppetca, /opt/puppet/bin/puppet, /usr/local/bin/puppet Defaults:foreman !requiretty foreman ALL = NOPASSWD: /usr/sbin/puppetrun, /opt/puppet/bin/puppet, /usr/local/bin/puppet</pre>	
<pre>foreman-proxy ALL = NOPASSWD: /usr/sbin/puppetca, /opt/puppet/bin/puppet, /usr/local/bin/puppet Defaults:foreman-proxy !requiretty</pre>	

History

#1 - 11/15/2012 06:37 AM - Greg Sutcliffe

- Status changed from New to Closed
- Target version set to Bug scrub
- % Done changed from 0 to 100

The installer should now add correct sudo permissions for the version of puppet running it. Closing.
