- bundle -v

Bundler version 1.1.4

This is correct, it's the standard Debian 7 version.

- gem -v

2.4.5

This is non-standard, it looks like you might have run "gem update --system" or similar. It should be version 1.8.23.

The error is because the version of Bundler is too old to work with the very new rubygems version.

I don't know if it's possible to downgrade it again, but if not, you may need to also install a newer version of bundler locally. This isn't intended to be supported with our packages, I don't know if you'll have further issues - we only intend to support stock configurations.

Here is the output on my VM for the same packages, which indicates you have a local difference.

```
root@foremandeb:~# bundle -v
Bundler version 1.1.4
root@foremandeb:~# gem -v
1.8.23
root@foremandeb:~# dpkg -l bundler ruby

That seems to have solved it, sry my bad.
The vagrant box i used propably did that
=> Thanks for your help
