Description

Trying to test foreman using Saltstack instead of puppet.

OS: CentOS 7.1

Foreman:
Version   : 1.8.0
Release   : 0.1.RC3.el7

```
[root@foreman1 ~]# foreman-installer \
 --no-enable-puppet \
 --enable-foreman-plugin-salt

 Could not start Service[foreman-proxy]: Execution of '/usr/bin/systemctl start foreman-proxy' ret
urned 1: Job for foreman-proxy.service failed. See 'systemctl status foreman-proxy.service' and 'j
ournalctl -xn' for details.

Blocked by Installer - Tracker #10161: Support Multiple Installation Scenarios	**Resolved**	**04/16/2015**

History

#1 - 04/22/2015 10:09 AM - Dominic Cleal

- Project changed from Foreman to Installer

Yeah, this is expected as the default SSL configuration relies on Puppet's certificate authority. It'd be possible to figure out and document a couple of scenarios, a) using your own certificate(s), b) no SSL configuration.

#2 - 04/22/2015 10:15 AM - Sebastiaan Glazenborg

Ok; so instead of a bug this should be a feature request?

c) change the dependency; not rely on Puppet generated SSL files?

For my info: "a) using your own certificate(s)" you are referring to these options correct?

--foreman-server-ssl-ca
--foreman-server-ssl-cert
--foreman-server-ssl-chain
--foreman-server-ssl-crl
--foreman-server-ssl-key

--foreman-proxy-ssl-ca
--foreman-proxy-ssl-cert
--foreman-proxy-ssl-key
--foreman-proxy-ssldir

#3 - 04/22/2015 10:19 AM - Dominic Cleal

Yes.
