**Description**

Hi

I've noticed that the "PreAllocated Disk" option is not being retained within the Compute Profile for oVirt.
Any "New Host" deployments with reference to the Compute Profile are created with thin provisioned disks, not pre allcoated.

Method to recreate :-

1. Create new or edit an existing Compute Profile
2. Configure a volume and select Pre Allocated disk
3. Submit the profile.
4. Edit the same Compute Profile and the Pre Allocated disk option will show as unselected.

Thank You
