

Foreman - Bug #1030

error while trying to change the mac-address of a host

Description		
I tried to change the mac-address of a host in foreman and got the error:		
Failed to set the DHCP record: Record 192.168.1.0/192.168.1.121 already exists		
now the dhcp-entry exists correctly but the foreman-db has still got the old mac-address and doesn't let me change it.		

History

- Status changed from New to Need more information

does it happen with any mac address? or just ones that were already exists in your subnet?

can you provide the relevant proxy and foreman logs?

thanks

It happens with any MAC-Address, and the problem is, that foreman didn't delete the DHCP-Lease for the 192.168.1.121/OLDMAC and tried to create 192.168.1.121/NEWMAC.

After manually deleting the entry from the dhcp-lease-file it worked.

We can't reproduce why the MAC-Address in the foreman-db and in the lease where different (that was the problem).
