

Foreman - Bug #10377

Re-importing an environment where class parameters were removed does not remove those parameters in Foreman's class signatures

05/05/2015 10:48 AM - Jon McKenzie

Status:	Duplicate	Fixed in Releases: Found in Releases: 1.8.0 Red Hat JIRA:
Priority:	Normal

Description		
<p>We recently upgraded a dev instance of Foreman (and associated proxies) to 1.8.0 and are running into an issue where re-importing an environment where class parameters have been removed does not actually remove those parameters in Foreman for that env.</p> <p>The initial way we found this was that the ENC output for clients included the deprecated parameters (this was after the re-import), causing Puppet runs to fail ("no such class parameter"). Additionally, when we try to re-import, Foreman claims there are still changes in the environment that it doesn't know about.</p> <p>As a workaround, we moved all hosts off that environment, deleted it, and re-imported it, and its signatures were then correct.</p> <p>Unfortunately, I didn't check beforehand if any hosts still had those removed parameters set, I later thought that that might've been the issue. (I'm not sure if moving the hosts off that environment and deleting it would've removed that information).</p>

Thanks for the report, this looks to be the same as [#7517](#), which I'll add some more info to in a moment.
