Refs #10409 - Rails 4 compatible changes with Rails 3

This includes some changes that can be applied to Rails 3 without any issue and don't follow any particular pattern/deprecation. In general these are minor things we have to change. Other PRs with retrocompatible changes that aim to fix particular deprecations have been submitted separately.

Sorry for the not-very-descriptive commit!

I am trying to migrate Satellite 6.1 (Foreman 1.9) database but getting:

```

Just for the record, this happens when you update audited gem first and then try to migrate database while there is also a setting change during initial boot. I wonder why we didn't see this during Foreman 1.11 RC upgrade.

Satellite 6.2 QA hit this today. I hit that as well, but only on Satellite. My Foreman instances were migrated just fine. Strange.

For the record, the related upstream commit is: <https://github.com/collectiveidea/audited/commit/112daaed409adff40c2be318286a955b7113e129>
