#### Description

Trying to configure BMC over HP iLO.

I am trying to configure Foreman to control the management interface of my server running CentOS-6.6. On the BMC tab it gives me the below error (PLEASE SEE SCREENSHOT). What am I missing . I loaded "ipmi\_si" and "ipmi\_devintf" kernel modules.

"Failed to fetch: 500 Internal Server Error"

Out of curiosity, what was the issue? Could you upload tail of /usr/share/foreman/logs/production.log when this happens?

I had to enable BMC (:enabled: true) in /etc/foreman-proxy/settings.d/bmc.yml to get this to work.
