

Foreman - Bug #10566

Unique interface identifier requirement prevents host from being edited if duplicate identifier exists

05/20/2015 04:57 PM - Patrick Mulrooney

Status: Closed	
Priority: Low	
Assignee: Marek Hulán	
Category: Network	
Target version: 1.8.2	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases: 1.8.1
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman/foreman/pull/2427	
Description Related to #9618 . Before the unique interface identifier validation was introduced we managed to get several hosts with multiple interfaces with the same identifier. Now that we have upgrade to 1.8+ when we attempt to resolve this situation by deleting the duplicate identifiers we are unable to due to the new validation. This seems like something the validator should check for as it creates a loop. You are unable to resolve the uniqueness requirement, because your interfaces are not unique.

Fixes #10566 - allow identifier modifications that do not change interface type

(cherry picked from commit a6b8542a0e1a7eb0d71fdd1d328b224669e3010b)

History

#1 - 05/20/2015 04:59 PM - Patrick Mulrooney

To reproduce...

1. Setup foreman such that a host has multiple interfaces with same identifier
- 1.5. I believe this can be done in versions prior to 1.8+
2. Upgrade to 1.8+
3. Attempt to remove one of the inter faces from the host.

- Related to Bug #9618: User shouldn't be allowed to create an interface with same identifier of any existing one added

#3 - 05/21/2015 03:37 AM - Dominic Cleal

- translation missing: en.field_release set to 56

#4 - 06/02/2015 01:40 PM - Rubén Fernández

I'm facing the same issue from fresh installation v1.8.1

I can't modify anything from that host because one interface is duplicated, but it not possible delete any of the duplicate entry.
