<b>Description</b>		
Hello,		
After having upgraded from Foreman 1.7.4 to 1.8.1, we are unable to create a new virtual host (using VCenter). It complains about the following: <a href="http://pastebin.com/Dn08XiyY">http://pastebin.com/Dn08XiyY</a>		
When I go to compute resources tab, I can list all VMs ... so the connectivity seems good.		
When I edit the compute resource and click submit button (without changing anything), I got the following: <a href="http://pastebin.com/ddW70bQ0">http://pastebin.com/ddW70bQ0</a>		
We had to rollback because basically our full foreman PROD was unable to provision any host.		
On the other hand, we have a Foreman DEV 1.8.1 (upgraded from 1.7.4 to 1.8.0 RC3 to 1.8.0 to 1.8.1), and there everything works smoothly.		
A fix would be very welcome :)		
Thx

I'm able to run Foreman 1.8.2 + VMware no problem. When you upgraded your instance, did you run the rake tasks?

foreman-rake db:migrate  
foreman-rake db:seed

My environment has been upgraded from 1.4 through to 1.8.2 so far

what's the status here?

#4 - 12/30/2016 09:53 AM - Anonymous

- Status changed from New to Rejected

no reaction, closing.
