Description

Hello,

After having upgraded from Foreman 1.7.4 to 1.8.1, we are unable to create a new virtual host (using VCenter).
It complains about the following: http://pastebin.com/Dn08XiyY

When I go to compute resources tab, I can list all VMs … so the connectivity seems good.
When I edit the compute resource and click submit button (without changing anything), I got the following:
http://pastebin.com/ddW70bQ0

We had to rollback because basically our full foreman PROD was unable to provision any host.

On the other hand, we have a Foreman DEV 1.8.1 (upgraded from 1.7.4 to 1.8.0 RC3 to 1.8.0 to 1.8.1), and there everything works smoothly.

A fix would be very welcome :)

Thx

I'm able to run Foreman 1.8.2 + VMware no problem. When you upgraded your instance, did you run the rake tasks?

foreman-rake db:migrate
foreman-rake db:seed

My environment has been upgraded from 1.4 through to 1.8.2 so far
