Description

New VM creation on ESX does not consider the specified NIC type. This issue occurs only through hammer CLI, web client works fine.
Issue is related to Bug#4307.

Command used:
hammer -v --show-ids host create --name mkforeman2 --hostgroup-id 1 --operatingsystem-id 6 --subnet-id 6 --compute-resource-id 13 --provision-method build --compute-attributes cpus="1",memory_mb="2048",cluster="hedvigcl2"
--volume="size_gb=30,datastore=ds-esxi55d-a" --architecture-id 1 --domain-id 1 --root-password Dobvus12 --partition-table-id 1
--interface="network=VLAN20,NIC type=VMXNET 3" --medium-id 7

It still creates vm with E1000 instead of VMXNET3.

- Status changed from New to Feedback

Could you please re-test on a newer release? We're not supporting 1.5.3 any more. Please try 1.8.1 and Hammer 0.2.0.

#2 - 05/17/2017 10:32 AM - Anonymous

- Status changed from Feedback to Resolved

should by fixed by now
