Description	
Hi,	
I noticed that the root password entered in the host creation phase is not correctly applied to the deployed machine. I guess because SUSE is using a different algorithm as the one that is used in foreman. Maybe Suse is using md5sum. I googled a lot for it but couldn't find any clear details what is used in Suse.	
Regards, Oliver

You are probably correct, the handling of encoding the password should be moved away to the OS layer, so each OS should handle the encryption it self.

I'm assuming most OS's support md5sum, and only solaris is still on crypt, however I'm not certain, would be great if anyone could contribute some knowledge here :)

#2 - 08/03/2011 07:59 AM - Oliver Weinmann

Hi Ohad,

I just deployed a new machine (SLES 11) I'm testing some things with provisioning here. Now the password worked. I found a type in the default OpenSUSE Provisioning template. Maybe the typo was my mistake?

I changed:

```
<%= root_pass %>/
```

to:

```
<%= root_pass %>
```

Now it works. :)

- Category set to Unattended installations

- Target version set to 0.4

great, do you want to send a git patch?

#4 - 08/04/2011 04:02 AM - Oliver Weinmann

I would love to. But I have no clue how to do this. :)

#5 - 08/04/2011 05:55 AM - Ohad Levy

something like:

read though [Contribute](#)

and then something like this:

```
cd /tmp
git clone git://github.com/ohadlevy/foreman.git foreman
cd foreman
vim app/views/unattended/autoyast.xml.erb
git diff
git ci app/views/unattended/autoyast.xml.erb -m "fixes #1084 - OpenSUSE / SLES deployment root password not working"
rake mail_patches
```

#6 - 08/04/2011 05:55 AM - Ohad Levy

- Assignee set to Oliver Weinmann

#7 - 08/18/2011 04:14 PM - Ohad Levy

sadly i never got the patch, mind attaching the git formatted patch here instead ?
