Foreman - Bug #10851

Selecting RHEL7 as a Guest OS when provisioning VMWare is broken

06/17/2015 10:12 AM - Josh Baird

Description

When provisioning a VMWare host and choosing "RedHat Enterprise Linux 7" as the 'Guest OS,' the guest OS actually ends up becoming 'Other (32bit)' within VMWare.

History

#1 - 02/28/2016 08:29 AM - Shlomi Zadok

Seems to be fixed with later versions (with rbvmomi >= 1.8, which added support for RHEL7).
Can you please verify on later versions of Foreman?
