Description

I got this error while trying to cancel a build.

Failed to remove puppetagent5.logicminds.corp from the autosign file: Failed to remove autosign for puppetagent5.logicminds.corp: No such file /etc/puppet/autosign.conf

Since I am using puppet enterprise the path needs to change to /etc/pupppetlabs/puppet/autosign.conf or be a configurable option.

History

#1 - 08/09/2011 02:16 AM - Corey Osman

workaround: ln -s /etc/puppetlabs/puppet/autosign.conf /etc/puppet/autosign.conf

#2 - 07/03/2012 09:21 AM - Benjamin Papillon

- Status changed from New to Feedback

In the recent smart-proxy code, it says that you can define the variable "puppetdir" in settings.yml
The default is to use /etc/puppet, but you can surely define it to match your configuration

```
:puppetdir: /etc/pupppetlabs/puppet
```

Can you check and tell me if its working?
