Description	
It would be nice if the host name was included in the tab title, when you are looking at the hosts facts. Right now it just shows up on every node as Fact Values. This can get confusing when you are trying to compare 10-20 hosts and want to easily see in the browser tabs, what host you are on.

refs #11029 - improve string for i18n, fix non-host case

The full title string has been extracted for better localisation, instead of appending hardcoded strings. The title when viewing all facts without a host is restored to the previous string.
