<b>Bugzilla link:</b>	<b>Red Hat JIRA:</b>
<b>Pull request:</b>	
<b>Description</b>	
Attempting to build a multi-environment puppet/foreman configuration. Fails during rake:	
/etc/puppet.conf:	
[main]	
1. The Puppet log directory.	
2. The default value is '\$vardir/log'.	
logdir = /var/log/puppet	
1. Where Puppet PID files are kept.	
2. The default value is '\$vardir/run'.	
rundir = /var/run/puppet	
1. Where SSL certificates are kept.	
2. The default value is '\$confdir/ssl'.	
ssldir = \$vardir/ssl	
[agent]	
1. The file in which puppetd stores a list of the classes	
2. associated with the retrieved configuration. Can be loaded in	
3. the separate ``puppet`` executable using the ``--loadclasses``	
4. option.	
5. The default value is '\$confdir/classes.txt'.	
classfile = \$vardir/classes.txt	
1. Where puppetd caches the local configuration. An	
2. extension indicating the cache format is added automatically.	
3. The default value is '\$confdir/localconfig'.	
localconfig = \$vardir/localconfig	
[master]	
external_nodes = /etc/puppet/external_nodes.rb	
node_terminus = exec	
modulepath = \$confdir/environments/\$environment/modules:\$confdir/modules	
manifest = \$confdir/manifests/unknown_environment.pp	
[production]	
manifest = \$confdir/manifests/site.pp	
[dev]	
manifest = \$confdir/manifests/site.pp	
[qa]	
manifest = \$confdir/manifests/site.pp	

#####

rake puppet:import:puppet\_classes RAILS\_ENV=production  
(in /usr/share/foreman)  
Evaluating possible changes to your installation  
Problems were detected during the evaluation phase

Unable to find directory \$confdir/environments/\$environment/modules in environment master

Sorry, but my Smart-Proxy Issue [#1552](#) is a duplicate of this and is now closed, merged into develop. This should probably be marked as a dupe.
