

Foreman - Bug #11144

foreman-proxy cannot find puppet.cert - use incorrect cert name (i think by default)

07/17/2015 07:18 AM - Aleksei Yamschikov

Description	
After i recreate puppet CA cert i get problem with foreman-proxy	
No such file or directory - /var/lib/puppet/ssl/certs/puppet.pem	
Trace:	
Errno::ENOENT No such file or directory - /var/lib/puppet/ssl/certs/puppet.pem lib/proxy_api/resource.rb:19:in `read' lib/proxy_api/resource.rb:19:in `initialize' lib/proxy_api/puppetca.rb:5:in `initialize' app/services/smart_proxies/puppet_ca.rb:19:in `new' app/services/smart_proxies/puppet_ca.rb:19:in `all' app/services/smart_proxies/puppet_ca.rb:36:in `find_by_state' app/controllers/puppetca_controller.rb:8:in `index' app/models/concerns/foreman/thread_session.rb:33:in `clear_thread' lib/middleware/catch_json_parse_errors.rb:9:in `call'	
in /etc/foreman-proxy/settings.d/foreman_proxy.yml all seems fine	
--- ### File managed with puppet ### ## Module: 'foreman_proxy' :settings_directory: /etc/foreman-proxy/settings.d # SSL Setup # if enabled, all communication would be verified via SSL # NOTE that both certificates need to be signed by the same CA in order for this to work # see http://theforeman.org/projects/smart-proxy/wiki/SSL for more information :ssl_ca_file: /var/lib/puppet/ssl/certs/ca.pem :ssl_certificate: /var/lib/puppet/ssl/certs/puppet.mydomain.com.pem :ssl_private_key: /var/lib/puppet/ssl/private_keys/puppet.mydomain.com.pem	
but in log when i restart foreman-proxy i see	
I, [2015-07-17T11:06:44.983418 #26094] INFO -- : 'foreman_proxy' settings were initialized with default values: :enabled: true I, [2015-07-17T11:10:29.119169 #26415] INFO -- : 'puppet' settings were initialized with default values: :puppet_provider: puppetrun, :puppetdir: /etc/puppet	

In /etc/foreman-proxy/settings.d/puppet.yml also correct path to certificate

```
# URL of the puppet master itself for API requests

:puppet_url: https://puppet.mydomain.com:8140

# SSL certificates used to access the puppet master API

:puppet_ssl_ca: /var/lib/puppet/ssl/certs/ca.pem

:puppet_ssl_cert: /var/lib/puppet/ssl/certs/puppet.mydomain.com.pem

:puppet_ssl_key: /var/lib/puppet/ssl/private_keys/puppet.mydomain.com.pem
```

Why in Foreman Web interface i see "No such file or directory - /var/lib/puppet/ssl/certs/puppet.pem"?
Where i can setup this option?
Now i cannot remove and readd foreman_proxy, and i cannot import changes in modules.

History

#1 - 07/17/2015 07:21 AM - Aleksei Yamschikov

i forget to add - foreman-proxy version 1.7.5

#2 - 07/17/2015 07:25 AM - Dominic Cleal

- Status changed from New to Feedback

Look under Administer > Settings for ssl_* settings, those are the certificates that Foreman's using to communicate to the smart proxy. It uses the FQDN as determined by Facter by default.

#3 - 07/17/2015 07:46 AM - Aleksei Yamschikov

Thank you. Now it work!
But i don't understand why it work before?
