Fixes [#10356](#) - changed the POST/PUT RABL template to be the same as

the GET template

You're right. This should have been mentioned as breaking version. I

would bring it up on the foreman-devel channel.

Hi guys,

I believe that the change above broke backwards compatibility in the API. I believe you should revert the change, and please don't break backwards compatibility unless it's accompanied with an API version bump. Thanks!

I'm not sure which is the before/after in the bug report, but I'm guessing this is something to do with the inherited controller. It may be that Katello needs to ship a create.json.rabl like Foreman's to get the additional attributes, don't know about the wrapping.

Foreman does this before and after [#10356](#).

```
# after
