

## Foreman - Bug #11173

### Multi-select should be initialized explicitly

<b>Description</b> Similarly to select2, we initialize multi-select for each select tag that <a href="#">contains multiple attribute</a> . What's even better we now initialize both JS libraries for multiple selects. I think we should explicitly mark selects on which we want to initialize multiple selects. We need to be able to control which select widget is right in particular form.
