Foreman - Bug #11187

Taxonomy selectors are empty even for users with assign permissions

07/22/2015 04:50 AM - Marek Hulán

Description

A patch that added authorization to multiple selects broke the taxonomies selects. It calls authorized without any arguments which means it check for any permission for a default resource (which is self). This can't work for Taxonomy (and other STI models) because permissions are mapped to children resources. Also I think that there should be view_$resource permission checked instead of any permission (not 100% sure about this though).
