Description

Cloning a hostgroup fails when it contains at least one parameter

Environment:
- CentOS 7
- Foreman 1.8.2
- postgresql 9.2.13

- Fresh install of Foreman
- Freshly created hostgroup named Default
- Clone hostgroup to Test1 (no parameters added) renders success
- Add a parameter (parameter_test=>Testvalue) and save renders success
- Clone the hostgroup to Test1 redirects to https://<foremanhost>/hostgroups without actually cloning the hostgroup.
