Description

Once external group sync is setup through AD LDAPS, which works, but doesn't seem to work as intended, because it doesn't create groups or sync permissions assigned to those external groups via roles, more importantly I stopped debugging the issue because when this feature was enabled, importing puppet classes and importing environments failed. I'll add the debug messages later, because my production instance is no longer available for experimentation.

History

#1 - 08/12/2015 03:25 AM - Dominic Cleal

- Status changed from New to Need more information

Using external user groups does not create groups - it assigns user groups to individual users only. Similarly it doesn't really sync permissions - by making a user a member of a user group, they inherit permissions.

Check that the users are actually made members of the group.

#2 - 02/29/2016 09:36 AM - Tomer Brisker

- Status changed from Need more information to Rejected

Seems that this works but differently then what the user expected. No more info has been provided in 7 months. Closing, please feel free to reopen if needed and provide more info.
