

Foreman - Feature #1133

Support configurable exportable "facts" (as tags) and "username" to rundeck

08/26/2011 03:16 PM - Marcello de Sousa

Status: Closed	
Priority: Normal	
Assignee: Marcello de Sousa	
Category: API	
Target version: 0.4	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>When exporting data o rundeck you should be able to specify what you want to export. In a similar way you also want to be able to specify the rundeck username.</p> <p>The proposed solution works as follows: Default behaviour (no parameters defined):</p> <pre>username = root exported facts/tags = classes</pre> <p>If want to change the behaviour, you specify a parameter in Foreman: Example: In foreman we've defined 2 parameters for the host "myserver1.mydomain.local" :</p> <pre>rundeckuser = mycustomuser rundeckfacts = domain,environment</pre> <p>So, querying:</p> <pre>curl -u admin:changeme "http://foreman/hosts/myserver1.mydomain.local?rundeck=true&format=yaml"</pre> <p>would result in:</p> <pre>--- myserver1.mydomain.local: osFamily: Redhat osVersion: "5.6" tags: - domain=mydomain.local - environment=master - class=ntp::main - class=puppet::client username: mycustomuser osName: CentOS osArch: x86_64 nodename: myserver1.mydomain.local description: My description test hostname: myserver1.mydomain.local</pre> <p>I'll submit a patch...</p>
