Foreman - Bug #11408

Plugin permissions are broken when using multiple selects

08/18/2015 04:39 PM - Stephen Benjamin

Status:	Duplicate

Pull request:			

Description

In app/helpers/layout_helper.rb, this:

```
permission = "view_#{klass.to_s.underscore.pluralize}"
```

causes problems with foreman_salt:

```
ERF42-5434 [Foreman::Exception]: unknown permission view_foreman_salt/salt_environments
```

Is it something I'm doing in particular in Salt that's causing this? It worked fine before this change.

Ah, it's not the taxonomix mixin - It's because I'm using multiple_selects which calls this "authorized_assocations" method that had its logic changed.

The idea is that you should probably alias chain the method to insert an appropriate view permission for that model. I've been thinking that it should perhaps have a better API, but I'm not sure what it'd look like.

#7 - 08/19/2015 08:42 AM - Stephen Benjamin

I could for now, but that doesn't seem ideal, foreman should provide an interface to get the custom permission from the klass.

Even better would be if permissions were DRYer. Magically generating the names doesn't work for plugins, and we already have a lot of this info in action_permission in the controllers, which for the vast majority of them only deal with CRUD and a single model. It'd be better if we'd store all this in one place.
