Description group_list in ldap_fluff returns a list of lowercase LDAP GIDs. https://github.com/foreman/ldap_fluff/blob/master/lib/ldap_fluff/generic_member_service.rb#L56 When foreman tries to run update_usergroups to refresh the external user groups, it will try to match these lowercase gids with external user group names. However, we don't enforce external user group names to be lowercase. If an external user group contains any capital letter, it will not be synced as it will not match the lowercase GID.

Revision 33d7500a - 09/03/2015 07:54 AM - Daniel Lobato Garcia

Fixes #11428 - External user groups refresh shouldn't be case sensitive

group_list in ldap_fluff returns a list of lowercase LDAP GIDs.
When AuthSourceLdap tries to run update_usergroups to refresh the external user groups, it will try to match these lowercase gids with external user group names.

However, we don't enforce external user group names to be lowercase. If an external user group contains any capital letter, it will not be synced as it will not match the lowercase GID.

This commit makes sure we search for external groups case insensitive, so we can match LDAP GIDs with external groups names.
