

Foreman - Feature #11451

Bookmark searches should only need to be unique within their controller

| Difficulty: | Fixed in Releases: |
| Triaged: | Found in Releases: |
| Bugzilla link: 1247984 | Red Hat JIRA: |
| Pull request: https://github.com/theforeman/foreman/pull/2631 | |
| Description | |
| Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1247984 | |
| Description of problem: In Satellite 6, I can bookmark searches. These bookmarked search are coupled to a controller in which they are available. | |
| I can make a search in the puppetclasses controller named 'ntp' for example, to search for the ntp class. The fact that the name of the bookmarked search needs to be globally unique means that I cannot create another bookmarked search for the lookup_keys controller named 'ntp' (which I'll probably want to do, since it's similar content as puppetclasses). | |
| Version-Release number of selected component (if applicable): foreman-1.7.2.32-1.el7sat.noarch | |
| How reproducible: | |
| Steps to Reproduce: 1. Create bookmarked search called 'ntp' in puppetclasses controller 2. Try to create a bookmarked search in another controller with the same name 3. | |
| Actual results: Cannot save second search | |
| Expected results: Bookmarked search should only need to be unique within the context of a single controller. Then I could save a second bookmarked search in the lookup_keys controller called 'ntp' as well. | |
