Description <p>Actually, in the default kickstart for redhat, we've a "yum upgrade" in the middle of the file. I think it is wrong to put "upgrade" because it will definitively upgrade the current install to the last release. In case I want to install Centos / Redhat 5.4, I don't want the installation process automatically upgrade it to 5.6</p> <p>That's why I think that you should modify the template with "yum update" instead of "yum upgrade". That would keep the current selected release updated !</p> <p>Thanks</p>

The patch is simple :

juste replace the "yum upgrade" by "yum update" into default KS files !

But if you tell me how to do that directly, let me know; I will be pleased to do that !

#3 - 10/03/2011 10:30 AM - Ohad Levy

- Category set to Unattended installations
