Bugzilla link:		
Pull request:		
Description When creating a new virtual machine using OpenStack compute resource we wanted to be able to add a second volume to it "/dev/vdb" in addition to the boot volume. The second volume will only be created in case the size value is > 0. I already implemented and tested this feature in our Lab, and I will be committing the code change to Github right after I create this issue. Any feedback on this change is appreciated. Thanks! Andre
