

Foreman - Refactor #11618

Replace validation tests by shoulda-matchers

08/31/2015 05:28 AM - Daniel Lobato Garcia

Pull request:	https://github.com/foreman/foreman/pull/2651	
Description <p>A good chunk of our unit tests are testing whether a validation is working or not by testing it actively. For the validations we've added ourselves I would say it's fine. However for validations that come from the Rails framework, we're essentially testing their job. Instead of testing (for instance) <code>validates(:name, :uniqueness => true)</code> by creating two objects and verifying the second one won't save (these tests are already done at the framework level), we should simply test we're including validations in our models.</p> <p>The well-maintained gem <code>shoulda-matchers</code> provide easy functions to check we're including such validations, and other helpers we can use to refactor our tests further and not test Rails functionality twice.</p>

Fixes #11618 - Replace validation tests by shoulda-matchers

A good chunk of our unit tests are testing whether a validation is working or not by testing it actively. For the validations we've added ourselves I would say it's fine. However for validations that come from the Rails framework, we're essentially testing their job.

Instead of testing (for instance) `validates(:name, :uniqueness => true)` by creating two objects and verifying the second one won't save (these tests are already done at the framework level), we should simply test we're including validations in our models.

The well-maintained gem `shoulda-matchers` provide easy functions to check we're including such validations, and other helpers we can use to refactor our tests further and not test Rails functionality twice.

History

#1 - 08/31/2015 05:30 AM - The Foreman Bot

- Status changed from New to Ready For Testing
- Pull request <https://github.com/foreman/foreman/pull/2651> added
- Pull request deleted ()

#2 - 01/13/2016 03:14 AM - Dominic Cleal
