Foreman - Feature #11628

Check templates when associating with hostgroup

Description

We see people struggling with HG provisioning using templates which cannot be used. I think we could prevent from this if we try to render the template the moment it is being associated with a hostgroup. And the same when template is saved, but associated as well.

This way we can error out early not allowing users to add new items to the default pxe menu.

Or maybe when we build the PXE menu?

#2 - 09/01/2015 05:57 AM - Lukas Zapletal

No we want to check:

- association
- template change
- hostgroup change

#3 - 09/01/2015 05:58 AM - Dominic Cleal

Association of a template to a host group doesn't imply that host group-based provisioning is being used, it may just be association to use it for regular provisioning over the OS default.

What do you mean by "regular provisioning over the OS default"?

#6 - 09/14/2015 08:27 AM - Dominic Cleal

Regular provisioning, preferring the associated template instead of the OS default.
