Description

I would dearly love for Foreman to expand and fill the gap in my infrastructure currently filled by Rundeck. This is a huge feature request and so I put together a wiki page on it with as much initial information as I could think to flesh out. It may not be appropriate for Foreman or something you are willing to look at.

You can see the page at http://www.theforeman.org/projects/foreman/wiki/Scripted_Processes

- Status changed from New to Resolved

With the introduction of plugins (specifically foreman_hooks, foreman_ansible, and foreman_remote_execution) I think we can say that there is a variety of ways to script things to happen either one-off, recurring, or trigger as part of a hook.

As such, I'm going to close this - do re-open if there's anything still missing.
