Pull request: https://github.com/Katello/puppet-capsule/pull/54	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1259294 Description of problem: capsule-installer sets incorrect file as a CA for client authentication. Steps to Reproduce: 1. install satellite and isolated capsule with custom certificates 2. try to register the host though the isolated capsule Actual results: Unable to verify server's identity: tlsv1 alert unknown ca Expected results: Everything works Additional info: The core issue is using katello_server_ca (used for server certificates) instead of katello_default_ca (used for client certificates)

Revision 25cb897a - 09/02/2015 07:49 AM - Ivan Necas

Fixes #11660 - use default CA for client certificates verification

The katello_server_ca_cert is not meant to verify client certificates (although it seems to work with all-in-one certificates).
