

Foreman - Bug #11661

Puppet importer class should return a warning when a class is defined twice

Description Had the problem that we added a class twice into puppet by a mistake. After import via Environments->Product->Import from puppet we just saw the changes of the second definition of the class. The first definition was ignored completely. We searched a long time until we found the problem, so it would be nice to get a warning from foreman when this happens.
