Description

After upgrading to the global host status, hosts who has no puppet report appear as green vs warning.

Fixes #11704 - consider no reports as warning if reports are expected

I think the intention is not to put hosts into a warning state when perhaps they don't even use configuration management.

However, we could implement #relevant? on ConfigurationStatus to be true when puppet? is true (and let other config management plugins to add their own conditions), then set it to warning if there are no reports.

#3 - 09/07/2015 03:04 AM - Marek Hulán

So we should probably distinguish between a host with puppet master and the rest, or is there better way to resolve "#puppet?". Otherwise we'd mark discovered hosts or hosts not using puppet with warning flag.

#4 - 09/07/2015 03:08 AM - Dominic Cleal

I think checking puppet_proxy (sorry, not #puppet?) is the only thing we usually do, e.g. on the host#edit form for whether to show Puppet-related tabs. Host status shouldn't apply to discovered hosts, but I think it's worth distinguishing between a host that should be sending reports and one that shouldn't.

OK, that makes sense to me and you're right about discovered hosts. I'll probably get to it this week.
