Description	
I couldn't find an easy way to get a list of all hosts for a puppetclass.	
I guess the following API call would fit:	
GET /api/puppetclasses/:puppetclass_id/hosts	

History

Well, I just figured out I could simply use the search function in the API v2:

```
GET /api/v2/hosts?search=class+%3D+somepuppetclass
```

Thus, from my side you may forget about this feature request.
