

## Smart Proxy - Bug #1177

### Deploying Solaris Sparc hosts doesn't work

<b>Description</b>	
Hi,	
I have had a discussion with Ohad in IRC yesterday regarding this. He thinks that this is a bug. When deploying a Solaris Sparc host and looking at the foreman log there is nothing displayed that the boot file is downloaded from the install media. Booting a Solaris Sparc host shows Error TFTP Error: File not found. I ran tcpdump on my tftp server and the client requests a file that is not there:	
<pre>root@puppet:~# tcpdump -i eth1 port 69 tcpdump: verbose output suppressed, use -v or -vv for full protocol decode listening on eth1, link-type EN10MB (Ethernet), capture size 96 bytes 09:10:03.921601 IP rose12.a.space.corp.56721 &gt; puppet.a.space.corp.tftp: 36 RRQ "Solaris-5.8--SUN 4U-inetboot" octet</pre>	
Regards, Oliver	

#### Associated revisions

##### Revision c4a55db9 - 09/28/2011 03:39 AM - Ohad Levy

fixes #1177 - Ensure that Solaris DHCP vendor options creation on Windows DHCP works correctly.
