

Foreman - Bug #12078

'List' validation for Smart Class params should work for any string coercible value

10/07/2015 03:13 AM - Jitendra Yejare

<b>Pull request:</b>	<a href="https://github.com/theforeman/foreman/pull/2788">https://github.com/theforeman/foreman/pull/2788</a>	
<b>Description</b>		
Description of problem: After Overriding the value of Smart class Parameter and validating the new default value with validator type 'list' fails.  Version-Release number of selected component (if applicable): foreman-1.10.0-0.develop.201510011619git0033595.el7.noarch foreman-release-scl-1-1.el7.x86_64  How reproducible: Always  Steps to Reproduce: 1. Override the default value of a smart class parameter. 2. Select the key type as array/string. 3. Give new default value as [1]/1. (Just an example, anything can be provided) 4. In Optional Input Validator, Select validator type as list. 5. In Validator Rule, give some list of values in which the new default value should be present. In my case its [1,2]. 6. Try to submit this change.  Actual results: 1. Validation Failed. 2. Not allowing to submit the change and labelling '[1] is not one of [1,2]' or '1 is not one of [1,2]' for Default Value field.  Expected results: Should be allowed to submit the change and validation should pass as obvious in above case.

The list validator shouldn't contain brackets, unless you're trying to validate their presence, i.e. [1

Using a basic validator against an array wouldn't work. Do you expect it to validate every element? Recursively? This is a feature request, not a bug.

- Status changed from New to Need more information

**#3 - 10/07/2015 04:03 AM - Jitendra Yejare**

Ok. Got it.  
I tried one more scenario here:  
Key type as 'Integer' & default value 1 with Validator Type as 'list' & Validator rule as 1,2 (without brackets). This fails saying '1 is not one of 1,2'.  
But It works if Key Type set to 'String with Validator type 'list' and rule 1,2 (without brackets).

- Status changed from Need more information to Ready For Testing  
- Pull request <https://github.com/theforeman/foreman/pull/2788> added  
- Pull request deleted ()

**#5 - 10/08/2015 02:38 AM - Daniel Lobato Garcia**

- Subject changed from In Smart Class Parameter, the validation for validator type 'list' is not working as expected. to 'List' validation for Smart Class params should work for any string coercible value  
  
I'll rephrase the title so that it matches what the pull request fixes.
