

## Foreman - Bug #12224

In Host Edit Form, overriding a 'long key name smart variable' doesn't truncates the key name.

<b>Pull request:</b>	
<b>Description</b>	
Description of problem: In Host Edit Form, overriding a 'long key name smart variable' doesn't truncates the key name.	
Version-Release number of selected component (if applicable): foreman-1.11.0-0.develop.201510151605git8893c3b.el7.noarch	
How reproducible: Always	
Steps to Reproduce: 1. In Puppet class, Create a smart variable with a long key name. 2. Add above puppet class to any host. 3. In Host, under parameters tab override the smart variable value and observe the smart variable name appears under the section 'Puppet class overrides'. 4. Hover on that name.	
Actual results: The smart variable name is not truncated and not showing the full name of smart variable.	
Expected results: The smart variable name should be truncated and should display the full name.	

### History

#### #1 - 10/20/2015 09:31 AM - Dominic Cleal

I don't fully understand the ticket description. The key name **is** truncated, that's the "..." after the name on the web page, that's normal behaviour. I don't see where in your screenshot it isn't truncated, according to the ticket title.

The name should probably not be truncated within the tooltip at all, but that may even be your browser or OS. (The name is a bit ridiculous anyway.)

#### #2 - 10/20/2015 09:31 AM - Dominic Cleal

- Status changed from *New* to *Need more information*

#### #3 - 10/29/2015 10:04 AM - Tomer Brisker

- Status changed from *Need more information* to *Rejected*

- Assignee set to *Tomer Brisker*

This looks like an issue with your OS or browser. Could not reproduce on nightly for neither Chrome nor Firefox, truncation is correct and tooltips display as expected even for extremely long parameter names. Closing this issue.
