

Foreman - Bug #12242

Interface form gets corrupted when adding virtual interfaces

10/21/2015 10:03 AM - Byron Miller

Description	
In foreman 1.9.x I have seen that the edit interface form gets corrupted when adding a virtual interface on a bond. At first the dropdowns are empty. Then if you save current edits and re-edit the interface the drop-down boxes double up and form looks corrupted

What happens is I have a host that is discovered by discover image, i click provision, i add a bond0 with 2 interfaces attached, i then go add a bond0.vlan and when i click to add this interface on vlan0 the screen is blank - i can't do the dropdowns, but i go click virtual and add the vlan info and save, then i go back and edit and then the screens are garbled and dropdowns duplicated.

#7 - 10/26/2015 04:10 AM - Dominic Cleal

Do you know if it works properly on the host edit page, as opposed to the Discovery provision page?

#8 - 11/06/2015 08:41 AM - Byron Miller

I just tried it on creating a new host and same issue, if i try and create a virtual interface none of the dropdowns are user selectable. I have to create the interface and then go back and edit it and once i do that, it doubles the dropdown lists.

Is anyone else experiencing this issue or do i have a bad cache or db cleanup i may need to do?

#9 - 11/06/2015 09:13 AM - Byron Miller

I noticed if i go backwards, create the virtual interface first i don't seem to see the corrupted form but if i create bond0 first i get the weirdness where i can't chose the dropdown boxes.

This might be fixed with [#14041](#), can you reproduce it on 1.10.3 or 1.11.0?
