ok it looks very similar to this problem:

http://groups.google.com/group/puppet-users/browse_thread/thread/6b7119c4178e4a76

itest the solution tomorrow.

ok i had no luck with the solution. After some research it seems that puppet 2.7.5 has changed the Class and Variable scope, i think the whole module needs restructured.

Hi,

ok if i replace the variables with normal strings, all works fine (except the augeas part).

```
class foreman_proxy::tftp {
  include ::tftp

  #file{ $foreman_proxy::params::tftp_dir:
    # owner  => $foreman_proxy::params::user,
    # mode   => 644,
    # require => Class["foreman_proxy::install"],
    # ensure => directory,
    # recurse => true;
  }
  file{ ["/tftpboot//pxelinux.cfg", "/tftpboot/build"]:
    owner  => $foreman_proxy::params::user,
    mode   => 644,
    require => Class["foreman_proxy::install"],
    ensure => directory,
    recurse => true;
  }

  #link_file{$foreman_proxy::params::syslinux_files:
    # source_path => $foreman_proxy::params::syslinux_root,
    # target_path => $foreman_proxy::params::tftpboot,
    # require     => Class["tftp::install"];
  }
  link_file{$foreman_proxy::params::syslinux_files:
    source_path => '/usr/share/syslinux', # $foreman_proxy::params::syslinux_root,
    target_path => '/tftpboot', # $foreman_proxy::params::tftpboot,
    require     => Class["tftp::install"];
  }
}

define link_file($source_path, $target_path) {
  file{"$target_path/$name":
    ensure => link,
    target => "$source_path/$name"
  }
}
```

#5 - 10/20/2011 02:20 PM - Joshua Hoblitt

- File *fix_foreman_proxy_tftp_params_scope_v2.7.diff* added

I'm attaching a patch the fixes the scoping issues under puppet 2.7.x.

#6 - 10/20/2011 02:31 PM - Joshua Hoblitt

- File *fix_foreman_proxy_tftp_params_scope_v2.6_v2.7.diff* added

I'm attaching an updated patch that I hope will work with puppet 2.6.x (untested). foreman_proxy is still not 100% working under puppet 2.7.5 but this failure appears to be unrelated.

```
[root@ctrl ~]# echo include foreman, foreman_proxy | puppet --verbose --modulepath /root/puppet-foreman/
warning: Implicit invocation of 'puppet apply' by passing files (or flags) directly
to 'puppet' is deprecated, and will be removed in the 2.8 series. Please
invoke 'puppet apply' directly in the future.
```

```

```

#7 - 12/07/2011 07:42 AM - Marcello de Sousa

About augeas, check my comment on [#1227](#)

#8 - 12/07/2011 11:23 AM - Joshua Hoblitt

Re [#1227](#) if that is an augeas problem, why are folks not seeing it under puppet 2.6.x? RHEL6.2 was released yesterday so hopefully I'll have a 6.2 test system up later this week.

#9 - 11/15/2012 09:31 AM - Ohad Levy

- Priority changed from High to Normal
- Target version set to Bug scrub

can't reproduce with latest foreman installer

#10 - 11/15/2012 12:37 PM - Sam Kottler

- Status changed from New to Closed

This doesn't seem to be an issue any longer with the versions of the modules included with the latest installer so I'm going to close this out.

#11 - 01/18/2019 02:43 PM - Ewoud Kohl van Wijngaarden

- Description updated
- Target version deleted (571)
- Triaged set to No
