| Description | |
| When using the preview function while editing the "PXELinux global default" template an error is returned in the UI. "There was an error rendering the PXELinux global default template: undefined method `each' for nil:NilClass." I've attached a traceback. It appears this errors is caused by not passing the @profiles variable into the template. | |

Had the same problem rendering the PXEGrub2 template on 1.14.2. I am using Foreman with bare metal machines only and do not have any profiles defined.

Fortunately the fix is simple and I created a pull request with fixes for the 3 affected templates.
