Pull request:	https://github.com/theforeman/foreman/pull/3770, https://github.com/theforeman/foreman/pull/3773		

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1247542
Description of problem:
Host provisioned from Satellite 6 but the profile is still in build mode and unable to cancel it.
Client is deployed and working fine.
Katello-agent and goferd packages are of latest version on client system.
goferd service working on client.

Version-Release number of selected component (if applicable):

How reproducible:

Steps to Reproduce:
1.
2.
3.

Actual results:
Failed to cancel pending build

Expected results:
After clicking on cancel build from webui the build should canecl.

Additional info:
No paused/pending task with result as error.
Clicking on cancel build do not initiate any task.
All services are working on satellite.

History

#1 - 11/20/2015 02:53 AM - Dominic Cleal

- Status changed from New to Need more information

There could be a huge number of reasons for this, can you point to exactly what validation/orchestration step is failing here? At least provide logs.

- Assignee changed from Ohad Levy to Shimon Shtein

#3 - 08/16/2016 07:44 AM - Ivan Necas

- Subject changed from When try to cancel build in the hosts screen it errors with "Failed to cancel pending build" on Red Hat Satellite 6. to Trying to cancel a build on a host with invalid data doesn't provide any additional information to address the problem

- Status changed from Need more information to New

- Target version set to 1.6.1

I've renamed the subject of the issue. I agree that there is too many things that could be wrong with the host to be able to address this in one issue. However, what all the issues have in common is the error message not really be informative.

The solution to this issue should be letting the user know what exactly is not valid on the host when the cancel build fails.
