

Foreman - Bug #12551

New VM host does not get network and storage from template

11/20/2015 11:55 AM - Bryan Kearney

Status: Resolved	
Priority: Normal	
Assignee: Ohad Levy	
Category: Compute resources	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1261663	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1261663	
Description of problem:	
If I create a new host and select the host group before setting deploy on -> RHEV and selecting a compute profile (bare metal is default) the template network and storage options do not get attached to the vm on the virtual machine tab. This leaves the VM with no network or storage when created in RHEV.	
If I select deploy on -> RHEV and a compute profile and then change the host group the VM is deployed with the expected settings and configuration.

I think this works fine at the moment, which version are you reporting this against? 1.10.0-RC3 should be OK.
