The table probably shouldn't have the ellipsis class at all.

I can't reproduce it, but the class probably isn't reliable being applied to a table and may depend on what text's inside and how it's wrapping?

Can't reproduce either.

Ah, it shows up in Firefox but not Chrome for me. Removing the class fixes it. Perhaps the class should be moved to some of the relevant tds instead.

Not introduced in 1.11 branch but the fix should get there I think
