Description

Tracker for updating to Fog 1.37.0 (or whatever is after 1.36.0).

fog-vsphere was moved to a separate gem. We need to add a require when including the fog extension, see

Awesome. Let me prep a PR for this...

Some extra pointers, since fog-vsphere is a new dependency:

1. bundler.d/vsphere.rb can now depend on fog-vsphere instead of rbvmomi
2. config/application.rb should be updated to set SETTINGS[:vsphere] in the same way as libvirt with defined?, rather than looking like ovirt (since fog-vsphere's no longer in Fog core)
