Description Due to changes in protected attributes, plugin seed script (bootdisk, discovery) now fails with: Can't mass-assign protected attributes: locked	
Related issues: Is duplicate of Foreman - Bug #12666: Mass assignment should be allowed for l... Closed 12/02/2015	

History

#1 - 12/02/2015 10:39 AM - Dominic Cleal

- Is duplicate of Bug #12666: Mass assignment should be allowed for locked attribute of template added

#2 - 12/02/2015 10:40 AM - Dominic Cleal

- Status changed from New to Duplicate

Bootdisk was already changed in https://github.com/foreman/foreman_bootdisk/commit/793648ecfcd87f75d4f953914bfd2b03ee346f33 to avoid mass-assignment.

However [#12666](#) will put it back as mass-assignment of locked is used in the API. I don't know that I'd suggest relying on it though.

Something wrong is with my custom google search, I need to fallback to Redmine search. Thanks.
